String: → primitive data

1. mutability v/s immutability — string is immutable in nature.

↳ 4 way to create string =

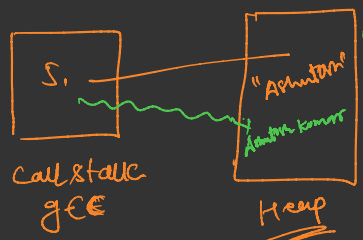
1. Let s_1 = "Ashutosh";
2. Let s_2 = 'Ashu';
3. Let s_3 = `Ashu`;
4. Let s_4 = new string("Ashutosh"); — object

→ constructor Functions

↳ object created

* All string character can access via index: charAt(index)

* string immutable : we can't change in string

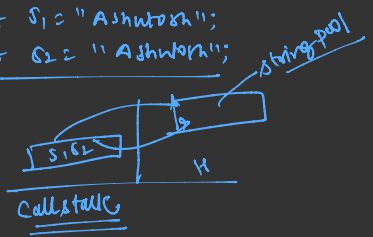


$s_1 = s_1 + $ "kumar"

* String literall

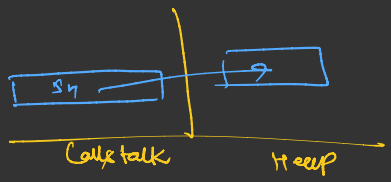
Let a = 5;

Let s_1 = "Ashutosh";
Let s_2 = "Ashutosh";



* String object *

Let s_4 = new string("")



* Let s_6 = `Amit`;

Backtick

we can write variable inside Backtick

* Temporal Literals.

* {String Interning}
